

# Service Kit Quick Help For Machine Repairs

Do you want those maintenance and service projects to go without a hitch in the field? While we can't guarantee success on every project, we can recommend tools and accessories that will greatly improve your chances of staying in the field. When Team Geoprobe® heads for a service call, the first tools loaded for the trip are a terminal kit, 12V test light, hydraulic caps and plugs, electrical tape, Silicone di-electrical compound, and an assortment of hand tools. To make it easy for you, we've collected these cool gadgets and put them in an easy-to-manage service kit. All you need to provide are the wrenches, screwdrivers, and probe machine!

**Service Kit (PN SV1000) contains a test light, terminal pliers, various electrical terminals, and hydraulic flared fitting caps and plugs.**
