*When operating the mechanical syringe or bladder pump within this profiler Geoprobe® recommends using the mechanical actuator (MN 214106) for sample collection

¹Not recommended for PFAS sampling.

²Recommended for VOC sampling except when sampling >6 samples per boring.

NOTE: When shallow groundwater conditions are present the 175GWP may be operated with a peristaltic pump from the surface. In this case a down hole pump is not used. With this setup the standard length 1.75-in. connection tubes (219594 or 225827 with friction reducer) may be used.

*When operating the mechanical syringe or bladder pump within this profiler Geoprobe® recommends using the mechanical actuator (MN 214106) for sample collection.
